Win32

16 Bit

As Enterprises are choosing 'cloud first' for application management, hybrid co-management using SCCM and Intune on Windows 10 is losing its appeal. Larger organisations are looking to migrate existing SCCM managed applications to Intune only deployment, and APPtechnology's SCCM to Intune packaging service can make this move simple and fast.

Our Service

Review your SCCM applications

We identify any SCCM hosted configurations that need to be considered

Determine the right format

Determine the best format for each application based on technical and business needs

Fixed Price

Package to the agreed formats, for importing into Intune. Can include Intune Import as an optional service

Deployment tested

All apps are deployment tested prior to return

Our Process

- 1** We review your SCCM hosted applications for additional configuration
- 2** We upload your SCCM packages and existing documentation
- 3** We'll clarify any points, create your package and test deploy
- 4** You'll get a notification to download, test and signoff, or we perform the Intune Import for you

Walk then Run

We want to remove any doubts you may have over our service. Sign up for 5 packages, and once the process is proven, we'll scale your delivery to meet your larger needs.
