# TRANSACTIONAL PROJECT SERVICES

Transactional Project Services
Facing new challenges

Enterprises have seen some dramatic changes over the past 24 months, an ever changing landscape where the Pandemic forced companies to make rapid decisions, from how to have their staff available whilst staying safe, to how an inflight or imminent project could be delivered despite social distancing.

Closer to home in the UK the IR35 legislation implemented on April 6th 2021 threw up some fascinating challenges for companies on how to manage staff and their IT project portfolio workloads.

APPtechnology had been researching and assessing ways we can help our clients stay one step ahead of logistical or legislative changes, whatever the circumstances.

After successful delivery of projects with up to 100,000 seats we can comfortably assist our clients to green light their projects when they become blocked, stalled or fall behind on delivery.

Our Transactional Project Service gives APPtechnology Clients fast access to purpose built teams, ready to deploy at short notice, with the ability to pick up a project from wherever it is in the lifecycle. We build project teams from highly experienced consultants who have worked with us for many years, and ensure the team contains the whole spectrum of skills needed to deliver your project, not just the technically relevant skillsets.

Statement of Work based Transactional Project Services

APP Technology

[PROJECT DISCOVERY AND DESIGN]

1. SCOPE
We meet with you to assess the scope

2. DESIGN
We assist with the design using APPtechnology architects

3. ASSISTED SOW
We work collaboratively to complete a detailed SOW capturing all defined workflows and deliverables

4. SERVICE DESIGN
Collaboratively completed

[DELIVERY TEAM]

5. PROJECT GOVERNANCE
Assign Client and APPtechnology Governance Lead

6. PROGRAMME LEAD
Introduce our Programme Lead

7. PROJECT MANAGER
Introduce our PM

8. BUSINESS ANALYST
Introduce our BA

9. ARCHITECTS / SMEs
Highly experienced for HLD and LLD

10. TECH DELIVERY CONSULTANTS
Engaged to deploy the technical implementation

11. TEST CONSULTANTS
Real World testing frameworks

12. CHANGE MANAGER
Release Management and Monitoring

[HANDOVER]

13. DOCUMENTATION
All documentation delivered / signed off

14. PROJECT HANDOVER
Project handed over to client

15. BAU TRAINING
An agreed timespan where we train internal teams on how to support the system

16. PROJECT CLOSURE

TPS Case Study
National Engineering capacity

A long standing client approached us with a challenge that would potentially impact their business and their customers, who were reliant on their essential services.

With the minimum disruption to live services, circa 5,000 office based users had to be physically and technically transitioned to become remote home workers, without impacting call and response times.
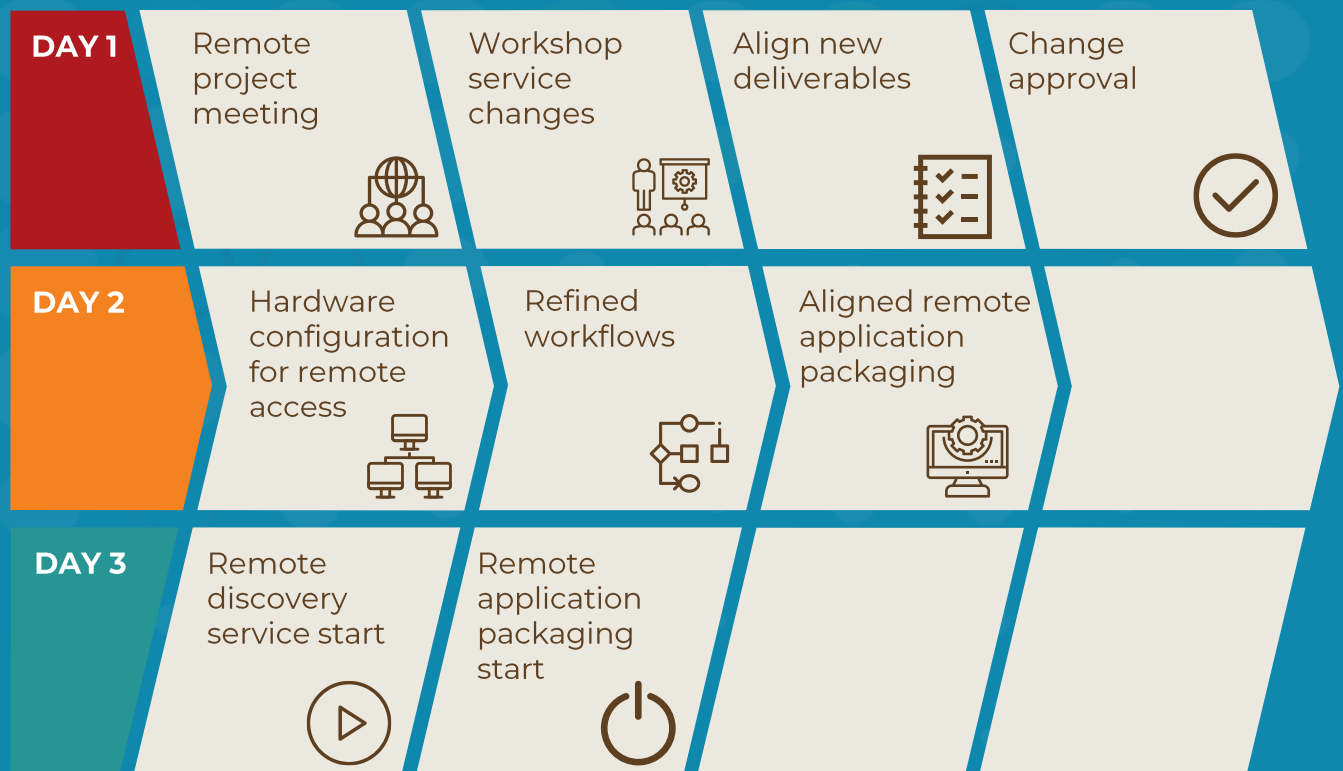

.

DAY 1	Remote project meeting	Scope Workshop	SOW creation	SOW approval
DAY 2	Align consultants	Confirm consultant deliverables	Confirm site deployments	
DAY 3	Project start	Live delivery 5 national sites		

TPS Case Study
W10 onsite services to remote delivery

Having started an application migration project for an NHS Trust, we had mobilised services onsite delivering discovery and packaging of applications for a Windows 10 transformation against tight timescales.

The NHS site became the Covid treatment center for the region, and space and onsite working became a challenge due to the influx of patients.

Without impacting discovery and packaging throughputs, APPtechnology worked with multiple key stakeholders to transition our services to remote working, delivering remote discovery, user interviews, full documentation and packaging. Discovered and packaged 500 applications within 4 months, with throughput actually increasing after transitioning to remote services.

DAY 1	Remote project meeting	Workshop service changes	Align new deliverables	Change approval

DAY 2	Hardware configuration for remote access	Refined workflows	Aligned remote application packaging	

DAY 3	Remote discovery service start	Remote application packaging start		

Transactional Project Services
Client benefits

Single point of contact delivery for projects

Outsourced model with governed in house features

Highly skilled SME's available at the click of a button

Removal of IR35 complexity

No lost time on interviewing

UK Onshore teams (time zone specific)

We're accountable for quality and skills

High knowledge base sharing with internal teams

Seamless flow from project delivery to internal support

How to engage APPtechnology
Transactional Project Services

Any new engagement starts with an overview call, to scope the general requirements and critical Goals. These are typically between 45 minutes to one hour

An APPtechnology Director will collaboratively drive the definition and transition of these Goals into detailed project deliverables, showing full costings and Governance structure, using APPtechnology Architects where needed

Once the Service is designed, delivery and governance starts under our Transactional project Services Framework

Contact APPtechnology:

To Speak to an APPtechnology Director regarding your challenge simply call Declan Smith, Director of Professional Services on +44 (0)207 469-4053
or email operations@apptechnology.co.uk
